ORIGIN *Beyond*TM
A New Breed of Zirconia

Replace Lithium Disilicate With The
Ideal Translucency and Strength of
Our New Zirconia
(803 mpa)

Easier Contact and Occlusal Adjustment
than Conventional Zirconia

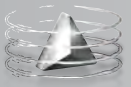

We've heard your demands for a more aesthetic zirconia based restorative choice. B&D Dental presents a new breed of zirconia - ORIGIN[®] Beyond[™]. A zirconia with such clarity that stump shades matter.

Once you've placed Beyond[™], you'll never view zirconia the same way again.

ORIGIN[®] Beyond[™] is a new breed of zirconia. It's superior aesthetic qualities combined with greater optical clarity make it ideal for anterior full contour restorations. Its vibrant transparency will raise posterior aesthetics to new heights while offering 2x the strength of lithium disilicate crowns.

- Optimized microstructure provides higher translucency
- Significant flexural strength, in excess of 803 Mpa
- Indications include inlays, onlays, single restorations, both anterior and posterior, and up to 3 unit anterior bridges
- Full contour restorations or substructures for layering
- Significantly more translucent than traditional high translucency zirconia

"The ORIGIN[®] Beyond[™] Full Contour Zirconia crown is far superior cosmetically to any other zirconia crown I have used. ORIGIN[®] Beyond[™] is my choice for a consistent, strong, and unbelievably aesthetic FCZ crown. ORIGIN[®] Beyond[™], has taken FCZ to a completely different level than anything else in this category. Beyond[™] is truly a complete cosmetic solution instead of just a restorative consideration. It's fascinating to see how far zirconia has come."

Dr. Thomas Zafiratos, Layton, Utah
